**Course Description:**

This is an especially interesting and important time to be studying macroeconomics as the world tries to cope with the multi-faceted impacts of COVID-19. This course introduces and explores the fundamental concepts of Macroeconomics – the study of aggregate economic quantities such as inflation, unemployment, GDP, interest rates, and money. We will also look at the ways in which governments may seek to manage an economy: the tools of monetary and fiscal policy.

The primary objective of this course is to provide you with a working knowledge of the basic terms and concepts of macroeconomics. Increasing your understanding of economics will enable you to make better, more informed decisions throughout your life. A secondary course objective is to familiarize you with current and recent conditions in the global economy and to help you understand more about the implications of those conditions as the US, China, and the rest of the world face the unique economic challenges of our time.

Throughout the course, current data from China and the U.S. will be used to provide specific examples that will help solidify the concepts discussed in class. The course topics will be connected to current events as appropriate. Topics also will include the measurement and explanation of aggregate economic performance, monetary and fiscal policies, business cycles, international trade, capital flows, and exchange rates.

**Course Goals:**

A student who satisfactorily completes this course should:

1. Understand the basic terms and concepts of macroeconomics
2. Understand how aggregate economic activity in a country is evaluated

3. Understand fiscal and monetary policy including their roles and applications
4. Be able to understand and critique articles in the press on macroeconomic issues.
5. Have a basic familiarity with current and recent macroeconomics conditions in the Chinese, U.S., and global economies.
